                                                                                                                                                                                                                                                                                                                                                             Sequence 6143, Application US/09513999C

Sequence 6143, Application US/09513999C

Patent No. 6783961

APPLICANT: Dumas Milne Edwards, J.B.

APPLICANT: Duclert, A.

APPLICANT: Giordano, J.Y.

TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.

Patent No. 6783961

Patent No. 6783961

CURRENT APPLICATION NUMBER: US/09/513,999C

PRIOR APPLICATION NUMBER: US 60/122,487

PRIOR FILING DATE: 1999-02-26

NUMBER OF SEQ ID NOS: 36681

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 25, Application US/09673809
Patent No. 6528261
GENERAL INFORMATION:
GENERAL INNOGENETICS N.V.
TITLE OF INVENTION: Method for typing of HLA alleles.
FILE REPERENCE: PCT99.86.HLA
CURRENT APPLICATION NUMBER: US/09/673,809
CURRENT FILING DATE: 2000-10-20
PRIOR APPLICATION NUMBER: 98870088.6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                EARLIER FILING DATE: 1997-06-06

Patent No. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster; FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

SOFTWARE: PatentIN Vor. 2.0

Application US/08127954

Patent No. 5451512

GENERAL INFORMATION:
APPLICANT: Apple, Raymond J.
APPLICANT: Bugawan, Teodorica L.
APPLICANT: Erlich, Henry A.
TITLE OF INVENTION: Methods and Reagents for HLA Class I A
TITLE OF INVENTION: Locus DNA Typing
NUMBER OF SEQUENCES: 173
                                                                                                    US-08-127-954-135

Sequence 139, Application US/08127954
Patent No. 5451512
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Apple, Raymond J.
APPLICANT: Apple, Raymond J.
APPLICANT: Enlich, Henry A.
TITLE OF INVENTION: Methods and Reagents for HLA Class I A
TITLE OF INVENTION: Locus DNA Typing
NUMBER OF SEQUENCES: 173
CORRESPONDENCE ADDRESS:
ADDRESSEE: Hoffmann-La Roche Inc.
STREET: 340 Kingsland Street
                                                                                                                                                                                                          25.0%; Score 5; DB 1; Length 182; 100.0%; Pred. No. 3.3e+02; tive 0; Mismatches 0; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 large surface antigen - woodchuck hepatitis virus (clone 7)
N;Contains: major surface antigen; middle surface antigen
C;Species: woodchuck hepatitis virus
C;Date: 30-Jun-1989 #sequence_revision 30-Jun-1989 #text_change 09-Jul-2004
C;Accession: D29969

Ny Contains: major surface antigen, middle surface antigen
Cispecies: woodchuck hepatitis virus
Cispecies: woodchuck hepatitis virus
Cipate: 31-Mar-1990 #sequence_revision 31-Mar-1990 #text_change 09-Jul-2004
CiAccession: B32397
